

MINERAL RESOURCE GEOLOGIST

Micon is presently looking for a Mineral Resource Geologist for a permanent position based in its Toronto office.

As a Mineral Resource Geologist you will be responsible for both auditing and estimating mineral resources for clients. You will also provide technical support and input to team assignments as well as acting as a technical resource for the company's clients. You will undertake assignments for the company which will involve travel to locations in Canada and throughout the world.

The successful candidate will have 8+ years of relevant experience and a minimum of a degree in Geology, Geological Engineering or equivalent, and will be a member of a certifying professional association. A strong background in exploration or mine geology, resource assessment and advanced stage project geology is required. Experience with geological modeling and open pit optimization software, resource/reserve estimation methods, knowledge of reserve definitions and reporting regulations (NI 43-101) is desirable.

This is a high visibility, high impact position with exposure to a variety of projects and consulting tasks.
