

NATIONAL INSTRUMENT 43-101 TECHNICAL REPORTS

Micon is fully familiar with the reporting requirements pertaining to reporting issuers under the terms of Canadian National Instrument 43-101. The Instrument requires public disclosure of information to investors in Canada by means of a Technical Report for such items as first time reporting and updates of mineral resource and reserve estimates, upon becoming a first time reporting issuer, filing of a preliminary prospectus, preliminary short form prospectus, information or proxy circular, offering memorandum, rights offering circular, Annual Information Form, a news release or directors circular, a valuation prepared and filed under securities regulation or a take over bid. Micon provided technical advice to the Mining Standards Task Force set up by the Toronto Stock Exchange and the Ontario Securities Commission and whose deliberations resulted in the enactment of National Instrument 43-101.

Amarillo Gold Corporation, Mara Rosa Gold Project, Brazil: Provided an independent summary and review of previous exploration results, and comments upon the proposed exploration program and budget. The report was prepared in support of a Material Change in the company.

Andina Minerals Inc., Review of Gold and Copper Exploration Potential of Mineral Properties in Chile: Micon reviewed six gold and copper exploration projects in northern Chile and provided a report in support of financing further exploration.

Aquiline Resources Inc., Calcatreu Gold-Silver Project, Argentina: An independent review of the previous exploration results on the property, and comment on the propriety of the proposed exploration program and budget in support of filing of a Material Change Report and a financing. A subsequent report was prepared in connection with a mineral resource estimate.

Ascendant Exploration S.A., Junin Property, Ecuador: An independent technical review of the mineral resources and proposed exploration program in support of raising of finance for the program. The mineralization found at Junin is quartz porphyry stockwork hosted copper and molybdenum.

Ascendant Exploration S.A., Chaucha Property, Ecuador: An independent technical review of the mineral resources and proposed exploration program in support of raising of finance for the program. The Chaucha property is divided into six areas of further potential for quartz porphyry stockwork hosted copper and molybdenum, and possible gold.

NATIONAL INSTRUMENT 43-101 TECHNICAL REPORTS

Athapap Gold Inc., Flin Flon, Manitoba: An independent technical review was provided of the exploration potential of the Wildnest Lake base metal and Athapap gold properties.

Atlantico Gold Inc., Amapari Project, Brazil: An independent technical review of the mineral resources and reserves, feasibility and pre-feasibility studies was prepared in connection with Atlantico's potential listing on the Toronto Stock Exchange.

Aurelian Resources Inc., Cordillera del Condor Project, Ecuador: A report was prepared describing the preparation and results of an initial mineral resource estimate for the Bonza-Las Penas deposit.

Aurelian Resources Inc., Fruta del Norte Deposit, Ecuador: Preparation of an independent technical report in support of the initial mineral resource estimate for the Fruta del Norte intermediate to low sulphidation epithermal gold-silver deposit.

Bachtech Enviromet Corporation, Tonkin Springs Gold Property, United States: An independent technical evaluation was prepared in support of an acquisition of an interest in the property.

Desert Sun Mining Corp., Jacobina Property, Brazil: Review of the proposed exploration program for the lands surrounding the Jacobina mine operation in support of financing of a proposed exploration program followed by a second report summarizing an independent review of an in-house mineral resource estimate. The mineralization found at Jacobina consists primarily of auriferous quartz pebble conglomerates.

Fortune Minerals Inc., NICO Property, Canada: The results of the mineral resource estimate prepared for the Bowl Zone were disclosed in an initial technical report. Further reports were prepared in support of updated mineral resource estimates for the NICO property and the results of the project feasibility study.

Full Riches Investments Ltd., Furtei, Osilo, and Monte Ollasteddu Gold Properties, Sardinia: Review of the classification of reserves and resources and the exploration potential of the properties.

Gold Eagle Joint Venture, Red Lake, Ontario: Description of the mineral resource estimate and recommendations for future exploration in respect of newly discovered gold mineralization located to the west of the past-producing Gold Eagle mine.

High Plains Uranium Inc., Texas and Wyoming, United States: Description of the setting of two roll-front uranium deposits, review of exploration information relating to the two properties and comments upon the proposed follow up program, in support of an Initial Public Offering.

NATIONAL INSTRUMENT 43-101 TECHNICAL REPORTS

International Minerals Corporation, Pallancata Project, Peru: Preparation of an independent Technical Report on the mineral resource and mineral reserve estimates for the Pallancata gold property.

Intercontinental Potash Corp./Trigon Uranium Corp.: Preparation of an independent Technical Report on the Ochoa polyhalite property, New Mexico.

Largo Resources Ltd., Machuchi Project, Cotopaxi Province, Ecuador: Disclosure of the results of an independent review of in-house mineral resource estimates completed for the Mercedes, Patiño and Esperanza gold-copper-silver deposits and classification of these resources according to the Canadian definitions.

Largo Resources Ltd., Maracas Vanadium Project, Brazil: Preparation of a Technical Report disclosing the results of the preliminary assessment of the Maracas vanadium project. This was preceded by an independent review of an in-house mineral resource estimate for the property.

Limerick Mines Limited, Limerick Nickel-Copper Prospect, Ontario: A summary review was provided of the exploration history, historical mineral resource estimates and proposed exploration program in support of an Initial Public Offering.

LLC Arion, Prognoz Silver Deposit, Republic of Sakha (Yakutia), Russian Federation: Review of the mineralization potential of the property in support of a listing application for the TSX-Venture Exchange.

Marathon PGM Corporation, Marathon PGM-Cu Project, Canada: Preparation of a Technical Report on the updated mineral resource estimate and feasibility study for the Marathon platinum group metal-copper project, Ontario.

Mustang Minerals Corp., Maskwa Property, Manitoba: Preparation of an independent Technical Report presenting the mineral resource and mineral reserve estimates and the results of the prefeasibility study for the Maskwa nickel-copper-cobalt-platinum group metal property.

North Atlantic Natural Resources AB, Storliden Mine, Sweden: An independent review was prepared of the mineral resources and mineral reserves of the Storliden copper-zinc mine.

Northern Orion Explorations Ltd., Bajo de la Alumbrera, Argentina: An independent technical review was prepared of the mineral resources and reserves and operational facilities for the copper-gold operation.

Riddarhyttan Resources AB, Suurikuusikko Gold Project, Finland: A report was prepared in support of a corporate reorganization and a subsequent public offering in order to present the mineral resource estimate, the results of metallurgical and engineering studies, and review of the proposed exploration program and budget.

NATIONAL INSTRUMENT 43-101 TECHNICAL REPORTS

Rusoro Mining Ltd., Choco 10 Property, Venezuela: Preparation of the Technical Report on the preliminary assessment of the expansion of production at the Choco 10 gold operation in Bolivar State.

Silvermex Resources Limited, Sonora State, Mexico: An independent Technical Report on a granite- and sedimentary breccia-hosted silver occurrence was prepared in support of a listing application on the TSX-Venture Exchange.

Timmins Gold Corporation, San Francisco Mine, Sonora, Mexico: Preparation of a Technical Report for a mesothermal gold deposit in support of a listing application for the TSX-Venture Exchange.

Trend Mining Company, Montana and Wyoming, United States: Preparation of a Technical Report on properties hosting Bushveld-style layered mafic intrusives with the potential to host platinum group metals mineralization, in support of a listing application for the TSX-Venture Exchange.

URSA Major Minerals Incorporated, Shakespeare Deposit, Canada: The results of a preliminary assessment completed in 2004, the project feasibility study in 2006 and updated feasibility study in 2008 were supported by a series of Technical Reports for the Shakespeare copper-nickel property.

Wheaton River Minerals Ltd., Los Filos Gold Deposit, Mexico: A Technical Report was prepared with respect to the exploration activities, resource estimations, technical studies and economic analyses in connection with a Material Change Report.

Wheaton River Minerals Ltd., Peak Gold Mines, Australia and Minera Alumbreira Ltd., Argentina Operations: An independent technical review was undertaken of the mineral resources and operational facilities of the Peak Gold Mines operation and the Alumbreira mine in support of a financial transaction.

Yamana Resources Inc., Chapada Copper-Gold Property, Brazil: A summary of the exploration activities, resource estimations, technical studies and economic analyses was prepared in support of the filing of a Material Change Report.

Young-Davidson Mines Limited, Matachewan Property, Canada: Preparation of a mineral resource estimate and supporting Technical Report for syenite-hosted gold mineralization extractable by both open pit and underground mining methods for the Matachewan property in Ontario.

Zaruma Resources Inc., San Antonio Property, Mexico: A summary review was prepared of the nature of the gold mineralization, resource estimate and exploration programs completed to-date and a proposed exploration program and budget. A second Technical Report described the revised mineral resource estimate which incorporated information from newly completed drill holes.
